ST PETER'S HEALTH
PARTNERS

At St. Peter's Health Partners, our dedicated team of breast health professionals collaborates with you and your doctor in the early detection, diagnosis and treatment of breast disease.

Our multidisciplinary team consists of:

- Mammographers with extensive experience and certification
- Radiologists and pathologists specializing in the detection and assessment of abnormalities
- Board-certified and fellowship-trained medical and radiation oncologists
- Board-certified and fellowship-trained breast surgeons
- Registered nurses trained in breast health and oncology
- Nurse navigators certified in breast health and cancer care

Working together, our goal is to ensure that those who entrust their care to St. Peter's Health Partners receive the highest level of breast care available, and maintain a winning edge in the fight against breast disease.

State-of-the-Art Breast Imaging

An annual mammogram is one of the best tools in the early detection of breast cancer. A mammogram is a low-dose X-ray that usually consists of multiple views of the breast.

For faster and more accurate results, we offer 3D mammography at all of our mammography locations. This superior imaging technology increases the accuracy in the detection of early invasive cancer across all age groups and breast densities.

Some patients require other types of imaging. This depends on their risk factors such as their age, genetic predisposition, breast density, or results from previous screenings.

- **Breast MRI** - Magnetic resonance imaging is very effective at detecting small breast cancers in younger women and for staging cancer development.
- **Breast ultrasound** - This technology is often used as a follow-up test after an abnormal finding on a mammogram, breast MRI or clinical breast exam.

Comprehensive Oncology Care

For those diagnosed with benign or malignant diseases of the breast, our team is dedicated to offering the best possible outcomes for patients. In Albany and Troy, we offer access to a full range of specialists including medical, surgical, and radiation oncologists; certified oncology nurses; nurse navigators; reconstructive surgeons, and more.

A better understanding of breast cancer today makes it possible to develop treatment plans that better fit a patient's overall health.

Following an abnormal finding, a patient may need to undergo a biopsy to determine the type and staging of the tumor. During a biopsy, samples of breast tissue are removed for testing. The most effective and least invasive approach is determined for each patient. Types of biopsy include:

- Stereotactic biopsy
- Ultrasound-guided biopsy
- MRI-guided biopsy
- Surgical biopsy

Our team of oncologists, radiologists and surgeons utilize today's most advanced options to treat breast disease. Our oncologists work with each patient to determine the most appropriate treatments.

- Chemotherapy
- Radiation therapy
- Immunotherapy
- Surgery
- Hormone therapy (anti-estrogen therapy)
- Genetic testing
- Clinical trials

Experienced Surgical Teams

With state-of-the-art procedure rooms, specially trained surgeons, and experienced surgical teams, St. Peter's Health Partners offers comprehensive breast surgery in both Albany and Troy.

Breast-Conserving Surgery

Breast-conserving surgery (or lumpectomy) is the most common form of breast cancer surgery. With a lumpectomy, the tumor and some surrounding tissue is removed.

Breast Reconstruction and Mastectomy

Mastectomy is surgery in which breast tissue, along with the cancerous tumor, is removed. Breast reconstruction may be performed simultaneously to mastectomy for immediate restoration of volume and shape, or at a later date if radiation therapy is necessary. Immediate reconstruction allows for a skin-sparing mastectomy in those who are appropriate candidates. The surgeons will consult with each patient to determine if immediate or delayed reconstruction is best.

For More Information

A complete list of our locations and services is referenced in this brochure, and is on our website at [sphp.com/breast-health](https://www.sphp.com/breast-health).

For additional questions, please contact one of our nurse navigators by calling **(518) 525-6667 in Albany, or (518) 268-5060 in Troy.**
